

*Jubaea chilensis*. (S.P.I. Nos. 28097 and 28098.)

The *Jubaea* grows abundantly in Chile between the latitudes of  $33^{\circ}$  and  $35^{\circ}$ . The nuts are used in the preparation of sweetmeats and sugar is made from the sap found in the trunk. The leaves are used for thatching houses and the trunks are hollowed out for water pipes, etc.
